

### UNDERWATER MONO BRUSH SYSTEM

The GAMSRO mono brush system is small and light and this makes it easy to transport. It is ideal for cleaning small surfaces underwater, or surfaces that cannot be reached by large cleaning systems.

GAMSRO's mono brush system is extremely efficient and it's special way of construction makes it the best choice for technical divers.

Different types of brush may be used on the mono brush system, depending on the surface or even the fouling.
