

ABOVE WATERLINE CLEANING

BEVALDIA (Manager of the branches PSOMAKARA & GAMSRO) disposes of assistant teams in most of our stations which provide cleaning services above the waterline in order to deal with the existing problem; when the vessels are in ballast condition and must be cleaned and some meters above the waterline remain fouled.

In this case, groups of experienced technicians undertake in a short time simultaneously with underwater hull cleaning operations to remove in a professional manner the fouling. Relevant reports before/after operations are always submitted to our customers.
