

UNDERWATER ANODES REPLACEMENT

BEVALDIA (Manager of the branches PSOMAKARA & GAMSRO) undertakes underwater fitting anodes and underwater replacement anodes (u/w replacement anodes) in the submerged parts of the ship such as rudder, propeller and hull. As a result, the smooth operation of the ship is extended and the costs of keeping the ship away from the dry-dock are reduced significantly.

Our company during the service of the underwater replacement anodes and underwater fitting anodes, inspects the area by simultaneously taking photos and video, which delivers to the ship-owning company and classification society, in order to determine whether there is a need for underwater replacement anodes (u/w replacement anodes). Then experienced divers remove the depleted anodes and weld on new ones, after having first of all cleaned the protected surface.

The quality of the company's services, even in the most difficult conditions, is assured, as the staff of BEVALDIA (Manager of the branches PSOMAKARA & GAMSRO), has years of experience in underwater fitting anodes and underwater replacement anodes (u/w replacement anodes) and has excellent technical skills and a high sense of professionalism.
